TITLE: Ball and roller bearing used in electromagnetic
clutch of compressors, contains base oil comprising
preset amount of rust proof additives added to rust proof
oil, applied to component(s) of bearing

INVENTOR: ISO K; OKITA S

PATENT-ASSIGNEE: NIPPON SEIKO KK[NSEI]

RELATED-ACC-NO: 2009-J89948

ABSTRACTED-PUB-NO: JP 2003106338 A

BASIC-ABSTRACT:

NOVELTY - A ball and roller bearing (1) has inner ring (10), outer ring (11), several balls (13) and retainer (12) for maintaining balls in sealed grease. A base oil comprising rust proof oil, is applied to bearing component(s). The rust proof oil comprises 0.1-20 mass% of rust proof additives having carboxylic acid group, carboxylate salt group and ester group. The base oil is mineral oil or synthetic oil.

USE - In electrically wired portion of motor vehicles, engine auxiliary machines such as alternating current dynamo, intermediate pulley, electromagnetic clutch of car air conditioners and gas heat pump and compressors.

ADVANTAGE - The bearing has excellent durability and rust-proof even when

subjected to high temperature, high speed and high load. The bearing suppresses generation of white structure peeling and hence provides favorable peeling prevention effect and improves antiwear quality.

DESCRIPTION OF DRAWING(S) - The figure shows a sectional drawing of ball and roller bearing.

EQUIVALENT-ABSTRACTS:

ORGANIC CHEMISTRY

Preferred Composition: The grease contains generation components of oxide film.

The rust proof oil contains 0.1-20 mass% of organometallic salt(s).
